Introducing MYOB Greentree Information Access and Reporting

To meet businesses' information and reporting needs a "one size fits all" solution is an impossibility. Today's complex enterprises need detailed information from multiple sources, expressed in multiple ways.

With a range of useful tools fully integrated into your MYOB Greentree system, all of your information enquiry, reporting and analysis needs are covered.

- + Total accessibility: pervasive access to your information in a central location
- + Better inform decision making with easy access to live, accurate information when its needed
- + 360° Information allows you to drill down and across information anywhere in your MYOB Greentree solution
- + Access your information wherever you are via web browser: no need to be tied to your office
- + Flexibility and control over outputs
- + Live links to Microsoft Excel
- + Extensive library of reports
- + Configurable search to find the information that is important to your organisation.

360° Information

MYOB Greentree's comprehensive information and reporting toolsets have been designed with 'extreme' access as a fundamental principle. This means that MYOB Greentree provides pervasive access to your information far beyond the boundaries of traditional solutions.

Workflow with 3D Live

Populate workflow desktops with live information that is highly contextually relevant to the task being performed.

Drill-down and across

Drill through and traverse information from anywhere on the platform by using MYOB Greentree's exceptional access to accurate, live information.

User-defined 'trees'

Analyse information from many different and user-definable dimensions right down to the transactional level.

Links and attachments

Easily find relevant information related to the record being viewed, e.g. supplier invoices and customer orders, utilising Greentree's diverse database links and attachments.

Query Tools

Drill, snap and report to flexible output formats with a range of purpose-built query tools.

Report Designer

MYOB Greentree's Report Designer allows you to create new reports with the advantage of direct access to the data structures on the platform.

Pre-built reports

Get started immediately with a library of over 300 pre-built reports.

Powerful Report Designer

Modify or extend pre-built reports or create new reports with the option to group or emphasise new information and tailor the look and feel.

Flexible outputs

Flexibly manage output to Excel, PDF or email to meet your needs.

Drill capability

Drill through report content to access underlying data using the 'live' reports.

Financial Reporting Microsoft Excel (F.R.E.E.)

Accountants love Microsoft Excel, and many use this tool every day to format, plan, and manipulate information for a wide variety of business uses. MYOB Greentree's Financial Reporting Engine in Excel, or (F.R.E.E.), allows you to use these skills to easily create dynamic financial reports, that reflect the current state of your business.

Live links to Microsoft Excel

Develop dynamic, up-to-the-minute financial reports in Microsoft Excel with ease, built with live data drawn directly from your MYOB Greentree operational system.

Drill down to core data

Have confidence in the accuracy of your financial information by using the unique drill down to the General Ledger option from within Microsoft Excel.

User-defined Trees

Analyse information from many different and user-definable dimensions right down to the transactional level.

Flexible budgeting tools using live links

Leverage the flexible modelling power of Microsoft Excel to develop new budget versions and update directly back to MYOB Greentree.

Beyond financial reporting capabilities

Use F.R.E.E. to post transactions, upload and modify master files and even connect legacy systems that cannot integrate directly with MYOB Greentree.

Data security

Apply all of MYOB Greentree's validation, security and your business rules, even though you're in Microsoft Excel.

Webview

WebView opens a dynamic web enquiry and reporting window into MYOB Greentree, giving users access to the full range of MYOB Greentree information. WebView makes any information that's available in your MYOB Greentree system simultaneously available through your browser.

Unlimited queries

Enquire into, report and review any information through permissions-based, customised forms and reports.

Customer and supplier Self-Service access

Give customers and suppliers access to information that is relevant to their business relationship with your organisation.

Financial reports

Publish a range of financial reports to remote management.

Reports and Documents

Manage all your financial reports and documents from the one location. Share the information across your team with built in alerts to tell you how many items are awaiting your attention. Never miss an important report, contract, agenda, update or any other record again.

Reports Panel

All your financial reports held in the one, easy-to-search location. Generate directly from MYOB Greentree, share across your team and see at a glance if a new report is awaiting your attention.

Library Panel

Electronically 'shelve' your important non-financial reports and documents in this highly searchable library. Generate from MYOB Greentree or upload from other sources. Share across your team and be alerted when new documents have been filed.

Greentree SQL

MYOB Greentree provides a host of inbuilt reporting and analysis tools plus open access for other reporting systems, such as Microsoft Reporting Services. MYOB Greentree SQL offers several methods to support open access from ODBC through to populating a data warehouse in Microsoft SQL Server in real time.

Pre-built maps

Populate Microsoft SQL Server using MYOB Greentree data maps.

Mapping Wizard

Use Jade's Relational Population Service (RPS) to map MYOB Greentree data to a SQL table structure.

Greentree API

Easily exchange information between MYOB Greentree and other software applications and devices. MYOB Greentree's API connection engine enables data to flow both ways, enabling all your applications to effectively communicate with MYOB Greentree.

RESTful API

Enables data to flow both ways, creating a seamless, reusable flow of information between MYOB Greentree and other sources of data.

Existing library

Choose from MYOB Greentree's extensive library of pre-engineered APIs.

Reduce configuration required

Some configuration may be required but with MYOB Greentree API, the connection engine does most of the work for you.
